

## Project Development Phase

### Model Performance Test

Date	18 February 2026
Team ID	LTVIP2026TMIDS65799
Project Name	Online Payments Fraud Detection using Machine Learning
Maximum Marks	

Model Performance Testing:

The following table summarizes the performance evaluation of the trained XGBoost fraud detection model.

S.No.	Parameter	Values	Screenshot
1	Model Summary	XGBoost Classifier trained on Kaggle dataset using transaction behavior features.	 <pre>print(xgb1)  ... XGBClassifier(base_score=None, booster=None, callbacks=None,                   colsample_bylevel=None, colsample_bynode=None,                   colsample_bytree=None, device=None, early_stopping_rounds=None,                   enable_categorical=False, eval_metric=None, feature_types=None,                   feature_weights=None, gamma=None, grow_policy=None,                   importance_type=None, interaction_constraints=None,                   learning_rate=None, max_bin=None, max_cat_threshold=None,                   max_cat_to_onehot=None, max_delta_step=None, max_depth=None,                   max_leaves=None, min_child_weight=None, missing=nan,                   monotone_constraints=None, multi_strategy=None, n_estimators=None,                   n_jobs=None, num_parallel_tree=None, ...)</pre>
2	Accuracy	Training Accuracy: 99.99% Validation Accuracy: 99.98%	 <pre>y_train_predict5 = xgb1.predict(x_train_numeric) train_accuracy = accuracy_score(y_train1,y_train_predict5) train_accuracy  .. 0.9999904033473125</pre>
3	Fine Tuning Result	Validation Accuracy after tuning: 99.98%	 <pre># Predict on test data (validation data) y_test_pred = xgb1.predict(x_test_numeric)  # Validation accuracy val_accuracy = accuracy_score(y_test1, y_test_pred)  print("Validation Accuracy:", round(val_accuracy * 100, 2), "%")  Validation Accuracy: 99.98 %</pre>
